NAPHTHALENE DERIVATIVE

Patent Number:

JP63146845

Publication date:

1988-06-18

Inventor(s):

IWASAKI TAMEO; others: 01

Applicant(s):

TANABE SEIYAKU CO LTD

Requested Patent:

Application Number: JP19870160720 19870626

Priority Number(s):

IPC Classification:

C07C69/76; C07D307/91; C07D317/70; C07D493/04

EC Classification:

Equivalents:

KR9200910

Abstract

NEW MATERIAL:A compound shown by formula I [R<1> and R<2> are lower alkoxycarbonyl or R<1> and R<2> form group shown by formula II further R<1> is H; R<3> and R<4> are lower alkoxy and one of R<3> and R<4> may be H; ring A is substituted or nonsubstituted benzene ring; with the proviso that when (a) R<1> and R<2> are COOCH3 and ring A is group shown by formula III, (b) R<1> is H R<2> is COOC2H5 and ring A is group shown by formula IV or (c) R<1> and R<2> are group shown by forming II and ring A is group shown by formula III IV, one of R<3> and R<4> is >=2C lower alkoxy or H] or a salt thereof. EXAMPLE:1-(3,4-Dimethoxyphenyl)-2, 3-bis(methoxycarbonyl)-4-hydroxy-6,7,8-tri methoxynaphthalene. USE:An antilipemic agent which lowers a total cholesterol value in blood but raises HDL-cholesterol value. PREPARATION:A compound shown by formula V (R<11> is R<1> except group shown by formula II; R<5> is lower alkyl) is reacted with a compound shown by formula VI or a lower alkylacetal derivative or a salt thereof to give a compound shown by formula I wherein R<1> and R<2> are not group shown by formula II.
